

Ezylay Glass Block Silicone System

Ezylay Stiffener Bar

13 Steps to building Glass Block Walls using Silicone

Ezylay Silicone System Connectors

1 Place the Ezylay expansion material in both verticals of the Ezylay frame ensuring it extends from top to bottom.

2 Cut the two "T" connectors where indicated as per diagram.

3 Place a cut "T" connector in each bottom corner of the frame sill with the open end against the expansion material.

4 Place the first row of glass blocks in the frame sill, supporting and spacing each block with a "T" connector.

5 Snap the required amount of "X" connectors onto the stiffening bar and 1 "T" connector on each end.

6 Place the stiffener bar, with connectors, onto the first row of glass blocks. Engage each connector into the joints between the blocks and press the bar down.

7 Place the next row of glass blocks and then repeat steps 5, 6 & 7 until one stiffener bar and one row of blocks remains to be installed.

8 Cut one leg off two "X" connectors (as illustrated) for the vertical joints closest to each end.

9 Snap the required amount of "X" connectors and two "T" connectors on to the last stiffening bar and place in position.

10 THE LAST ROW

Insert glass blocks at each end working towards the centre.

11 Top blocks are inserted in head of frame as illustrated in 10 & 11.

12 Ensure glass blocks are neatly aligned before silicone is applied.

13 APPLYING SILICONE

Read directions on silicone tube before proceeding. Gun silicone into joints ahead of nozzle to ensure adequate silicone penetration. Spray glass block with soapy water. Tool off excess silicone. Leave 24 hours to dry.

NB: Silicone will skin within five minutes, tooling off should be carried out within this time
